

AEROBIC DIGESTER AFTER USING BIO ENERGIZER

The operators at the City of Wentzville, Missouri wanted better digester performance. They wanted better settling sludge, more decant and more room to waste sludge... within their existing digesters.

After hearing what BIO ENERGIZER is doing for enhanced solids destruction and better settleability in other digesters across the country, they decided to use BIO ENERGIZER in their own digester to see what would happen.

Below is a graph showing the enhanced volatile solids destruction BIO ENERGIZER is giving to the digester. For the City of Wentzville, adding BIO ENERGIZER means greater digester capacity, more sludge storage, better settleability and decants, and better overall aerobic digester operation. Up to 85% VS destruction! and save money on sludge removal, handling, and hauling costs.
