

ILLINOIS BIO ENERGIZER SLUDGE REMOVAL

For years, the City of Ottawa, Illinois contracted with a sludge removal company to dredge and haul wasted digester solids from their sludge storage lagoon.

To cut sludge removal costs, management decided to oxidize sludge in place using the biochemical BIO ENERGIZER. In 18 months, Ottawa added 922 dry tons to the 1,940 dry tons of existing sludge. BIO ENERGIZER removed 775 dry tons of sludge at a cost of \$36/dry ton saving Ottawa \$58, 135 or \$77 dry ton.

Ottawa continues to slash their sludge removal costs by using BIO ENERGIZER. With the rising costs of sludge removal and hauling, BIO ENERGIZER is a good investment.
